
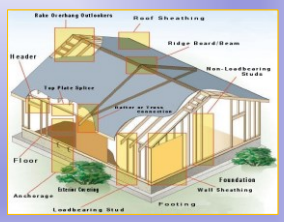
Conventional Wood Framing

- Foundation anchorage
- Floor, wall, and roof framing
- Girders and headers
- Notching and boring
- Braced wall panels
- Load path verification
- Fasteners and Fireblocking

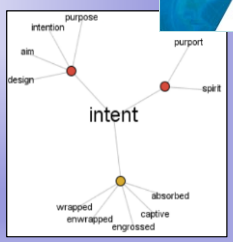


Disclaimer

- The opinions expressed in this presentation are the opinions of the presenter, Russell Thornburg, and do not represent the official opinion of the *International Code Council (ICC) or that* of the administrative authority of any Jurisdiction, County or State. As always, the Building Official of the Jurisdiction is the **Final** Authority.
- ***This handout is used as a guideline for the instructor and no part of this work may be reproduced, distributed or transmitted in any form or by any means, including, without limitation, electronic, optical or mechanical, without advance written permission from Russell Thornburg.***
- The text in this presentation does not necessarily represent actual code language. The presented text may summarize, highlight or generalize the code section. Additional provisions or exceptions may be included in the actual code section. Many references to the code sections are given for the purpose of you verifying the complete provisions of those section/s.

Understanding the intent

- Know the Big Picture
- Identify Code Requirements
- Know Tables
- Interpret Code Accurately



R101.3

Applicability

- Conflict: general and specific = specific
- Differences: code and referenced standards = code
- Where: specific and code = most restrictive shall govern
- When: code and standard violates listing = listing and manufacturer's shall apply

dd vs. R317.3.1

R102.1

Administration

- Work exempt from permit

  …. Exemption from permit requirements of this code shall not be deemed to grant authorization for any work to be done in any manner in violation of the provisions of this code or any other laws or ordinances of this jurisdiction.

R105.2

Administration

- Construction Documents

  Manufacturer's installation instructions

  Manufacturer's installation instructions, as required by this code, shall be available on the job site at the time of inspection.

R106.1.2

Framing Inspection

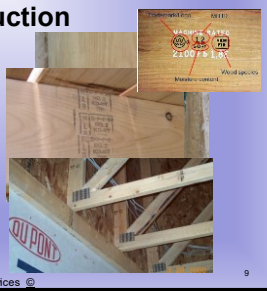
- Made after the roof, masonry, all framing, firestopping, draftstopping and bracing are in place, and
- Made after the plumbing, mechanical and electrical rough inspections are approved.

Do not cover until all has been inspected and approved.

R109.1.4

Floors, Walls, Ceilings & Roofs Construction

- All dimension lumber for shall be identified by a grade mark, certification or approved inspection agency.



R502.1, 602.1. 802.1 Identification

Floors, Walls, Ceilings & Roofs Construction

Lumber grade

- Blocking: floors & rafters – utility
- Floor joist- #3
- Girders/Headers- # 2
- Studs - # 3 or stud grade and NLB walls - Utility
- Cantilever floor joist #2
- Rafters – SS - # 3

R502., Table R502.3.3(1) fnt b, 602.2. 802

Protection against Decay

All wood meeting these parameters required to be preservative-treated in accordance with AWPA U1

- Joists or the bottom of a wood structural floor <18"
- Girders <12" to the exposed ground
- All wood framing members that rest on concrete or masonry exterior foundation walls & < 8" exposed ground

R317.1, R402.1.2

American Wood Protection Association

Protection against Decay

Location required.

2. & 3 All sills or plates that rest on concrete or masonry exterior walls *and* are less than 8 inches from exposed earth.

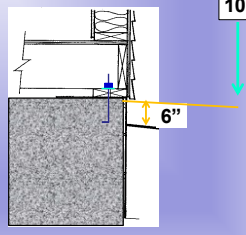
R317.1

Protection against Decay

- Wood siding, sheathing and wall framing on the exterior of a building having a clearance of < 6" from exposed ground
- < 2" measured vertically from concrete steps, porch slabs, patio slabs, and similar horizontal surfaces exposed to the weather

R317.1 item 5

- Lots shall be graded to drain surface water away from foundation walls.
- The grade shall fall not fewer than 6" w/n the first 10'



R401.3 Drainage

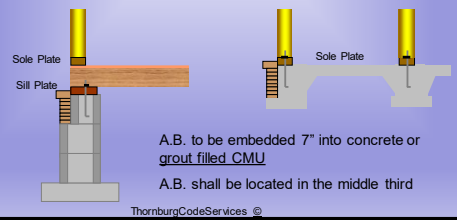
Foundation Anchorage

- Sill plates and walls supported directly on continuous foundation shall be anchored to the foundation in accordance with this section.
- Wood sole plates at all exterior walls on monolithic slabs, wood sole plates of *braced wall panels* at building interiors on monolithic slabs *and* all wood sill plates shall anchored to the foundation with anchor blots spaced a maximum of 6 feet on center.

IRC R403.1.6

R403.1.6: Foundation Anchorage

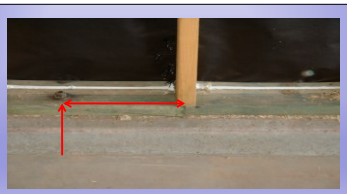
Definitions: *sill plate, sole plate*



A.B. to be embedded 7" into concrete or grout filled CMU

A.B. shall be located in the middle third

1. Minimum of ***two*** anchor bolts per plate section.
2. ***One*** bolt located not more than 12 inches nor less than seven bolts diameters (3.5") from each end of each plates.
3. Bolts **shall be** at least ½" diameter and embedded a minimum of seven inches into masonry or concrete.
4. Located in ***Middle third***



R403.1.6 Foundation Anchorage

Foundation

Foundation anchorage.

Question: How close to the edge of the plate can the hole be drilled?

Answer: The bolts shall be located in the middle third of the width of the plate. If engineered by the (NDS), for loads perpendicular to the grain, states the minimum edge distance is four times the diameter of the bolt (measured to the center of the bolt).

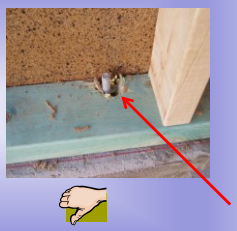
R403.1.6 & NDS, WFCM

Foundation

Foundation anchorage.

Question: Are there limitations on the size of the hole for the bolt?

Answer: Although not specifically noted in the code, the NDS specifies that holes drilled for bolts shall be a minimum of 1/32 inch to a maximum of 1/16 inch larger than the bolt diameter (9/16 inch to 5/8 inch for a ½ inch diameter bolt).



IRC R403.1.6 & NDS WFCM

Placement of the Anchor Bolts

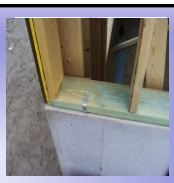
Foundation

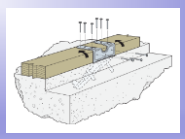
Foundation anchorage.

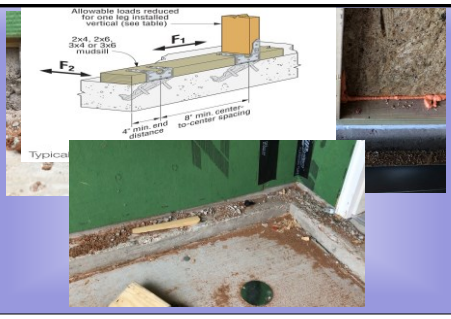
Question: Can anchor straps be used instead of the bolts?

Answer: If approved by the building official (based on testing, submittal documents, ES reports, etc.).

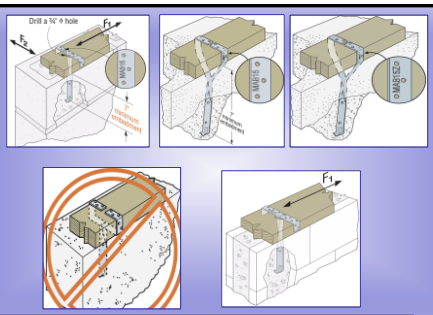
Evaluation Service (ES) Reports can be found at www.icc-es.org - (straps continued)







https://www.strongtie.com/mudsillanchors_concreteconnectorsandanchors/masa_anchor/p/masa



https://www.strongtie.com/mudsillanchors_concreteconnectorsandanchors/mab_anchor/p/mab

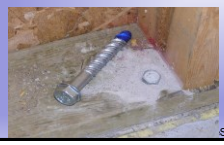
Foundation

Foundation anchorage.

Question: Can the sill plate overhang the foundation wall?

Answer: Although not clearly specified in R403.1.6 of the code, in Section 2.4.1.3 of the WFCM, "Bottom Plate," it notes that bottom plates that are connected directly to the foundation shall have full bearing on the foundation.

Foundation Anchorage



Foundation

Protection against decay.

Question: Is the interior foundation wall sill plate required to be pressure preservative treated or a species that is naturally durable?

Answer: Yes, unless separated from the ground by an impervious moisture barrier. Section R506.2.3 requires the installation of a 6 mil poly or approved vapor retarder with joints lapped between the slab and sub grade.

R317.1 & R506.2.3

Foundation

Foundation anchorage.

Question: Is a deck or porch post or addition support required to be anchored to the foundation?

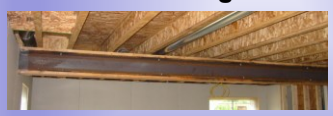
Answer: Yes. It is to be designed to resist lateral movement and uplift.

Wood shall be pressure-preservative treated & dried after treatment in accordance with AWPA U1 (Commodity Specification A, Special Requirement 4.2), and shall bear the *label* of an accredited agency.

R402.1.2 Wood treatment, R407.3 Structural requirements, R507.8.1

Load path not complete to foundation.

Design Criteria



Not addressed in code

Fastener Schedule

Design and construction.

Question: Where are the nailing requirements for framing members (plates, studs, joists, rafters, ties, bracing, sheathing, etc.)?

Answer: Most of the fastening provisions are in the tables and figures in IRC Chapter 6.
(continued on next page)

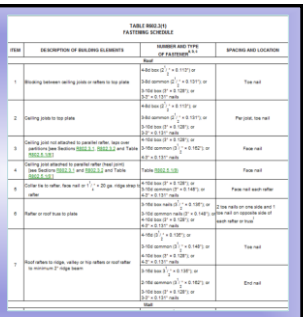


TABLE R602.3(1)
FASTENING SCHEDULE

ITEM	DESCRIPTION OF BUILDING ELEMENTS	NUMBER AND TYPE OF FASTENER[a, b, c]	SPACING AND LOCATION
	Roof		
1	Blocking between ceiling joists or rafters to top plate	4-8d box ($2\frac{1}{2}$" × 0.113"); or 3-8d common ($2\frac{1}{2}$" × 0.131"); or 3-10d box (3" × 0.128"); or 3" × 0.131" nails	Toe nail
2	Ceiling joists to top plate	4-8d box ($2\frac{1}{2}$" × 0.113"); or 3-8d common ($2\frac{1}{2}$" × 0.131"); or 3-10d box (3" × 0.128"); or 3" × 0.131" nails	Per joist, toe nail
3	Ceiling joist not attached to parallel rafter, laps over partitions (see Sections R802.3.1, R802.3.2 and Table R802.5.1(9))	4-10d box (3" × 0.128"); or 3-16d common ($3\frac{1}{2}$" × 0.162"); or 4" × 0.131" nails	Face nail
4	Ceiling joist attached to parallel rafter (heel joint) (see Sections R802.3.1 and R802.3.2 and Table R802.5.1(9))	Table R802.5.1(9)	Face nail
5	Collar tie to rafter, face nail or $1\frac{1}{2}$" × 20 ga. ridge strap to rafter	4-10d box (3" × 0.128"); or 3-10d common (3" × 0.148"); or 4" × 0.131" nails	Face nail each rafter
6	Rafter or roof truss to plate	4-16d box ($3\frac{1}{2}$" × 0.135"); or 3-16d common nails (3" × 0.148"); or 4-10d box (3" × 0.128"); or 4" × 0.131" nails	2 toe nails on one side and 1 end nail on opposite side of each rafter or truss
7	Roof rafters to ridge, valley or hip rafters or roof rafter to minimum 2" ridge beam	4-16d ($3\frac{1}{2}$" × 0.135"); or 3-10d common ($3\frac{1}{2}$" × 0.148"); or 4-10d box (3" × 0.128"); or 4" × 0.131" nails	Toe nail
		3-16d box ($3\frac{1}{2}$" × 0.135"); or 2-16d common ($3\frac{1}{2}$" × 0.162"); or 3-10d box (3" × 0.128"); or 3" × 0.131" nails	End nail
		Wall

Fasteners – R317.3

Fasteners for pressure preservative and fire-retardant treated wood shall be hot-dipped zinc-coated galvanized steel, stainless steel, silicon bronze or copper in accordance with ASTM A 153.

This provision includes all nails used to attach floor joists, studs, or wall sheathing to the treated wood (it does not apply to ½ inch or greater steel anchor bolts).

EVALUATION SUBJECT:

LPI 18, LPI 20W, LPI 20, LPI 20X1.8 (ALSO KNOWN AS LPI 20 PLUS), LPI 20X1.5, LPI 32W (ALSO KNOWN AS LPI 32PLUS), LPI 32, AND LPI 42X1.8 (ALSO KNOWN AS LPI 42PLUS) WOOD I-JOISTS AND RIM BOARDS

series, except for the LPI 42X1.8 series, flange width is 2½ inches (64 mm). For the LPI 42X1.8 series, flange width is 3½ inches (89 mm). The flange thickness is 1½ inches (38 mm). The LPI wood I-joist depths range from 9½ to 24 inches (241 to 610 mm).

3.2 Material Specifications:

3.2.1 Flanges: Flange material is sawn lumber that meets the requirements noted in the quality control manual that contains the manufacturing standards.

3.2.2 Web: Webs are minimum ⅜-inch-thick (9.5 mm) panel for the 9½- to 16-inch (241 to 406 mm) I-joist depths, and minimum 7/16-inch-thick (11 mm) panel for the 18- to 24-inch (457 to 610 mm) I-joist depths complying with U.S. Voluntary Product Standard PS 2 and the quality control manual.

3.2.3 Adhesives: Adhesives are exterior wet use types complying with ASTM D 2559 and are of the types specified

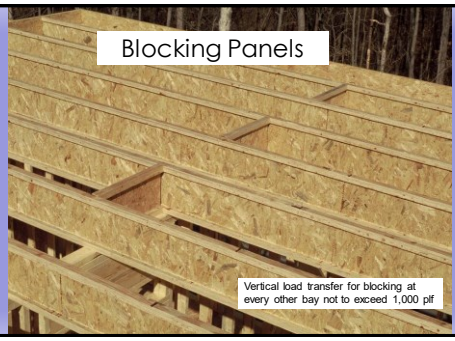
Blocking Panels



Vertical load transfer for blocking at every other bay not to exceed 1,000 plf

62

NOTE
The illustration below is showing several suggested applications for the Boise Cascade EWP products. It is not intended to show an actual house under construction.

NO MIDSPAN BRIDGING IS REQUIRED FOR BCI® JOISTS

FOR INSTALLATION STABILITY, Temporary strut lines (1x4 min.) 8' on center max. Fasten at each joist with 2-8d nails minimum.

Dimension lumber is not suitable for use as a rim board in BCI® floor systems.

F01 F02 BCI® rim joist. See Floor Details below.

F07 Boise Cascade Rimboard. See pages 6 and 25 of the Eastern Specifier Guide.

F06 F09 BCI® Joist block or 2x4 "squash" block on each side required when supporting a load-bearing wall above.

When installing Boise Cascade EWP products with treated wood, use only connectors/fasteners that are approved for use with the corresponding wood treatment.

F15 VERSA-LAM® header or a BCI® Joist header.

1½" knockout holes at approximately 12" o.c. are pre-punched.

F15 F58

See PANEL 1 for allowable hole sizes and location.

F27A VERSA-LAM® LVL beam.

Endwall blocking as required per governing building code.

For load-bearing cantilever details, see PANELS 3 & 4.

BCI® Joist Blocking is required when BCI® Joists are cantilevered.

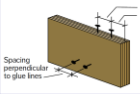
Fastening Recommendations

MINIMUM NAIL SPACING FOR RIGIDLAM LVL BEAMS

Component Solutions™) or engineering analysis.



Nail Size	Minimum Parallel Spacing	Minimum Parallel End Distance	Minimum Perpendicular Spacing
8d Box	2"	1-1/2"	2"
8d Common	3"	2"	2"
10d & 12d Box	3"	2"	2"
10d & 12d Common	4"	3"	3"
16d Sinker	4"	3"	3"
16d Common	6"	4"	3"

Fastening Recommendations For Multiple Ply Members

Top Loaded Members - 2 & 3 Ply

For 12" deep (or less) members, nail plies together with 2 rows of 16d×3-1/2" com. nails at 12" o.c. (add 1 row for 16d sinkers).

For 14", 16" or 18" deep members, nail plies together with 3 rows of 16d×3-1/2" com. nails at 12" o.c. (add 1 row for 16d sinkers).

For 20", 22" or 24" deep members, nail plies together with 4 rows of 16d×3-1/2" com. nails at 12" o.c. (add 1 row for 16d sinkers).

Top Loaded Members - 4 Ply

For 4-Ply Top Loaded members, it is recommended to connect the plies together with appropriate wood screws. See page 41 for approved wood screws.

The recommended fastener spacing is two rows at 24" o.c. for up to and including 16" deep members, and 3 rows at 24" o.c. for members up to and including 24" deep. If the fastener point penetrates a minimum of 75% of the 4th ply, they may be applied from one side of the beam; otherwise, the fasteners must be applied from both sides and staggered.

Load must be applied evenly to all 4 plies; otherwise, use connections for side loaded members.

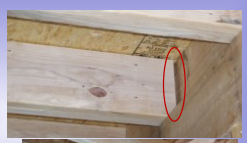
Floor framing

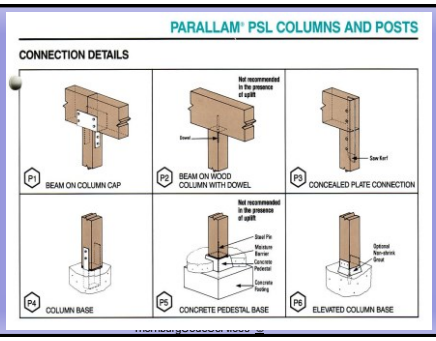
Bearing.

The ends of each joist, beam or girder shall have not less than 1.5 inches of bearing on wood … or by the use of approved joist hangers.



Section R502.6

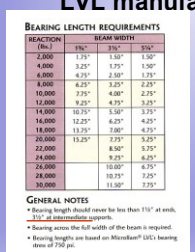
111



112

113

Actual bearing length may vary per LVL manufacturer and load.



BEARING LENGTH REQUIREMENTS

REACTION (lbs.)	BEAM WIDTH 1¾"	3½"	5¼"
2,000	1.75"	1.50"	1.50"
4,000	3.25"	1.75"	1.50"
6,000	4.75"	2.50"	1.75"
8,000	6.25"	3.25"	2.25"
10,000	7.75"	4.00"	2.75"
12,000	9.25"	4.75"	3.25"
14,000	10.75"	5.50"	3.75"
16,000	12.25"	6.25"	4.25"
18,000	13.75"	7.00"	4.75"
20,000	15.25"	7.75"	5.25"
22,000		8.50"	5.75"
24,000		9.25"	6.25"
26,000		10.00"	6.75"
28,000		10.75"	7.25"
30,000		11.50"	7.75"

GENERAL NOTES

- Bearing length should never be less than 1½" at ends, 3½" at intermediate supports.
- Bearing across the full width of the beam is required.
- Bearing lengths are based on Microllam® LVL's bearing stress of 750 psi.

R106.1.2 Manufacturer's installation instructions

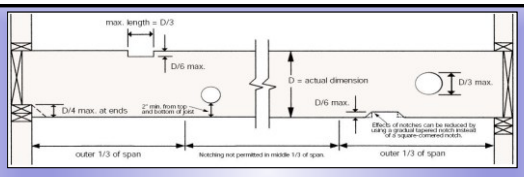
126

Framing Inspection

Fireblocking required.

"Shall be provided to cut off all concealed draft openings (both vertical and horizontal) and to form an effective fire barrier between stories, and between a top story and the roof space."

IRC section R302.11, R602.8, R1001.12



Notching of sawn lumber floor joist shall not exceed the limits of Figure R502.8.

Table 1: Maximum Sizes for Cuts in Floor Joists

Joist Size	Max. Hole	Max Notch Depth	Max. End Notch
2x4	none	none	none
2x6	1-1/2"	7/8"	1-3/8"
2x8	2-3/8"	1-1/4"	1-7/8"
2x10	3"	1-1/2"	2-3/8"
2x12	3-3/4"	1-7/8"	2-7/8"

Western Wood Product Association

Floor framing

Drilled holes in floor joists.

The diameter of bored holes shall not exceed one-third the depth of the joist … Holes shall not be closer than 2 inches to the top or bottom of the member, or to any other hole … When the joist is also notched, the hole shall not be closer than 2 inches to the notch.

(notches continued on next page)

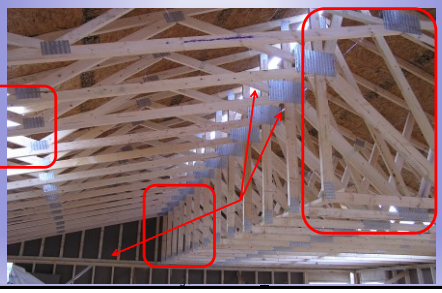
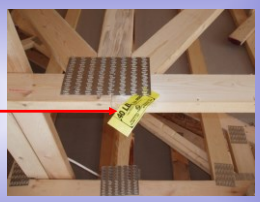
R802.10 Wood Trusses



145

Engineered roof trusses

Verify if the design loads are appropriate for the particular structure, including verification of any snow load.



Section R802.10

146

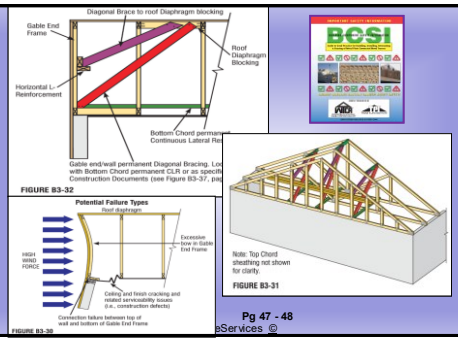
Engineered roof trusses

Verify size and nailing of lateral bracing noted on the truss specs.

1 x 4 lateral bracing will usually require two 8d nails at each truss.

Section R802.10.3 & BCSI

147



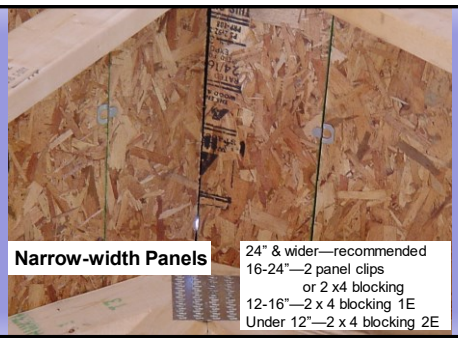
Pg 47 - 48

148

Engineered roof trusses

Verify bracing.

149



Narrow-width Panels

24" & wider—recommended
16-24"—2 panel clips
or 2 x4 blocking
12-16"—2 x 4 blocking 1E
Under 12"—2 x 4 blocking 2E

150

Gable End

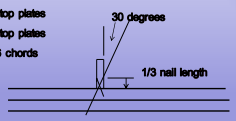
Pg. 49

Load path not complete to foundation.

How much uplift resistance will toe-nailing provide?

- 4 -16d box with spf bottom chords or top plates would provide 128 of uplift resistance.

3 toe-nails for 2x4 top plates
5 toe-nails for 2x6 top plates
Limited to 4 for 2x6 chords



Pg 65

NDS provides engineering basis for toe-nail and slant-nail connections.

Bracing

- T-bracing is used when a one of a kind truss in installed and neighboring webs or chords don't line up.
- The T-brace method required no additional bracing. Continuous lateral bracing would require an additional diagonal brace.
- The lateral bracing may also be stabilized by connecting to another part of the roof structure, that is connected to another part such as the roof diaphragm.

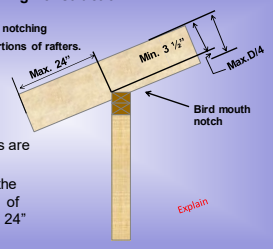
CHAPTER 8: Roof-Ceiling Construction

R802.7 Cutting, drilling and notching
R802.7.1.1 Cantilevered portions of rafters.



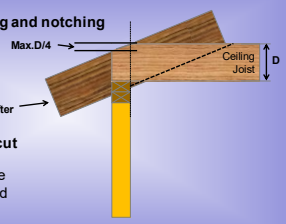
- Notches on cantilevered rafters are permitted
- Provided remaining portion of the rafter is ≥ 3 ½" **and** the length of the cantilever does not exceed 24" in Figure R802.7.1.1.

Test

R316.4Thermal barrier.
Unless otherwise allowed in Section R316.5, foam plastic shall be separated from the interior of a building by an *approved* thermal barrier

CHAPTER 8: Roof-Ceiling Construction

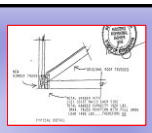
R802.7 Cutting, drilling and notching



R802.7.1.2 Ceiling joist taper cut

- Taper cuts at the ends of the ceiling joist ***shall not*** exceed **one-fourth** the depth of the member in accordance with Figure R802.7.1.2.

Framing Inspection



Alterations to trusses

Truss members shall not be cut, notched, drilled, spliced or otherwise altered in any way without the approval of a registered design professional.

CHAPTER 8: Roof-Ceiling Construction

Table R802.5.1(9) - Ceiling Joist & Rafter Connection. Footnotes:

a. 10d common (3" × 0.148") nails shall be permitted to be substituted for 16d common (3½" × 0.162") nails where the required number of nails is taken as 1.2 times the required number of 16d common nails, rounded up to the next full nail.
b. Heel joint connections are not required where the ridge is supported by a load-bearing wall, header or ridge beam.
c. Where intermediate support of the rafter is provided by vertical struts or purlins to a load-bearing wall, the tabulated heel joint connection requirements shall be permitted to be reduced proportionally to the reduction in span.
e. Equivalent nailing patterns are required for ceiling joist to ceiling joist lap splices.
f. Where rafter ties are substituted for ceiling joists, the heel joint connection requirement shall be taken as the tabulated heel joint connection requirement for two-thirds of the actual rafter slope.
g. Tabulated requirements are based on 10 psf roof dead load in combination with the specified roof snow load and roof live load.
